

# Case Study: Dunnes Stores, Monaghan Town

## Refurbishment Project

Dunnes Stores, one of Ireland's premier retailers with over 150 stores in the Group employing 18,000 people. Dunnes Stores chose Matrix Electrical to provide the electrical services solution to the refurbishment of this existing store in Monaghan Town.

The project was demanding in that all work had to be completed outside store opening hours. The store remained trading throughout the entire programme and no trading time was lost.

*"All tasks were dealt with effectively by co-ordinated on-site staff, who worked successfully with my design team to bring the project to completion."*

Mr Patrick J. Power  
Patrick Power Design Associates

Refurbishment works carried out by Matrix involved the upgrade of all electrical services throughout the store - Distribution Boards, Lighting, General Services, PA System, Fire Alarm, Intruder Alarm & CCTV System.

These works enabled Dunnes Stores to bring its store up to date in modern retail outlet design, which is essential in meeting consumer requirements in the increasingly competitive and consumer focused retail environment.

*"I would highly recommend Matrix Electrical on future relevant tender lists"*

Mr Patrick J. Power, Patrick Power Design Associates

Matrix Electrical's team of experienced professionals on-site ensured the store had access to full power requirements each morning following works during the previous night. This was achieved through extensive forward planning and coordination with the client and the design team. Moreover, this was a very important aspect of the project and depended considerably on Matrix's technical knowledge and ability to ensure the programme progressed smoothly and ultimately, successfully.
